

### Introduction:

Congratulations on becoming the owner of a **COOL CAT UKES ELECTRIC FINGER CAJON**. Designed for discreet drummers, but with the great ability to amplify your rhythm sounds via a built-in pickup.

### Operation:

Simply plug into a bass amplifier using a standard guitar style 1/4" jack lead. As the unit will basically function as a microphone, beware of feedback. You should never plug in with the PA turned up to 11 in any case! For best results, turn the treble and mid down and the bass up if you have access to the tone control. Then, simply tap out your beats on the surfaces of the box. You can also use it as a stomp box so you can accompany yourself on ukulele or other, lesser instruments if you wish. Your choice of footwear will change the tone of the instrument. Wear brogues for a classier sound.

### Variation:

Your **COOL CAT UKES ELECTRIC FINGER CAJON** can produce different sounds. Try using the tips and sides of your fingers, even tap with your fingernails. For other sounds, wear gloves, use brushes (old toothbrushes could be good), or wear a thimble. Just some ideas.

### For clarity:

Although called the **COOL CAT UKES ELECTRIC FINGER CAJON**, electric fingers are not actually required.

### Finally:

Enjoy your new **COOL CAT UKES ELECTRIC FINGER CAJON**.
